

Security Questionnaire

Purpose: This security questionnaire is used to evaluate the vendor's security controls, compliance posture, and operational security practices. The responses will be used to assess the vendor's ability to protect the bank's sensitive employee information and meet the bank's security and compliance requirements.

1. Access Management

- a. Describe the administrative, physical, and technical controls used to protect customer data? Include how user access is granted, reviewed and revoked.

2. Data Protection

- a. Describe the encryption standards used when dealing with customer data? Include how data is encrypted at rest, in use, and in transit.
- b. Describe how data is segregated when dealing with multiple different companies?
- c. Describe how data is disposed of or deleted when an employee no longer works within the bank?

3. Governance, Risk, and Compliance

- a. Describe what audits take place or the compliance frameworks that are used and how often those audits take place?

4. Security Monitoring and Logging

- a. Describe how the platform is monitored and is there documentation to prove?
- b. Describe the logging process? Include what logs are generated and can the bank have access to these logs?

5. Secure Development & Vulnerability Management

- a. Describe the practices the developers use to prevent vulnerabilities? Include any frameworks or guidelines.

6. Business Availability

- a. Describe how services remain available during disruptions like updates or patches? If maintenance or service disruption occur, what are the expected downtimes?

7. Incident Response

- a. Describe how the vendor responds to and communicates with the bank during security incidents?
